

Environmental Policy

Teckentrup UK Ltd and ABC Doors Ltd are committed to minimising the environmental impacts of our business operations. We will act in a responsible way and take a proactive approach to continually improving our environmental performance. We will ensure compliance with all legal, customer and industry requirements in which we operate as a minimum. We believe our actions today will shape the world in which we live, and we will therefore create a culture which collectively works to continually reduce our environmental impacts and deliver environmental enhancements where possible.

To ensure our commitment to environmental and sustainability we will:

- Manage our business operations to prevent pollution, reducing our local impacts and effects of disturbance, noise and air pollution,
- Avoid environmentally unfriendly substances, any substances we use that damage the environment are to be replaced by more environmentally friendly alternatives wherever possible,
- Keep waste to a minimum, unavoidable waste must be separated as effectively as possible and then either reused, recycled or properly disposed of via approved companies only,
- Improving our energy efficiency, seeking environmentally sound alternatives where reasonably practicable. As our business involves production, we are dependent on using energy, so we are committed to following the guidelines in the internationally standardised management system ISO 50001, and
- Review our key objectives and targets at least annually.

To achieve this, we expect that each one of us will:

- Take accountability to ensure our actions do not adversely impact the environment,
- Ensure we develop Environmental practices into our business processes, and
- Speak up if concerned about an activity or decision.

This policy represents our position on environmental issues and practices we will apply.
